WE ARE HIRING

COMPOLYTICS

Compolytics is passionate about bringing innovative sensor technology and AI-based modelling into industrial applications for the benefit of people, businesses, and society.

Mechatronics Engineer

Your tasks & challenges

- Design, revise, implement, test, and optimise Compolytics products according to functionality, UX, and cost.
- Coordinate closely with the Compolytics product line, customer requirements as well as technical and regulatory constraints.
- Deployment and brief on-site user training.
- Participation in measurement campaigns, application trainings, and trade fairs.

Why work with us

- Performance-based remuneration model with social benefits in line with the German labour market; fixed mid-year and end-of-year bonus.
- Independent working and very short communication and decision-making paths in the company.
- Agility and spirit of a small tech company.
- Enjoy a pleasant, safe, and reasonably priced lifestyle of the Greater Magdeburg Area in the centre of Germany.

Your qualifications & abilities

- Master in mechatronics, technical computer science, or electrical engineering.
- Several years of experience in product development with a focus on electronic engineering, optical measurement technology, firmware programming, and interface layout.
- Willingness to travel and high intercultural competence for global markets.
- Fluent in business English, knowledge of German is considered an advantage.
- Car driving licence.

How to apply

- Send your enquiries or cover letter, CV, and certificates to: careers@compolytics.com.
